

ESSENTIAL COATINGS

WHEEL+

THE ANSWER TO PREVENT TOUGH TO REMOVE ACCUMULATED BRAKE-DUST.

Our carbon nanotubes enhanced formula promises excellent brake-dust and dirt repelling properties.

Brake-dust and road grime that has hardened and adhered to wheels will no longer be an issue. Able to withstand adverse and high temperature environments, giving you long-term ease of wheel cleaning without the need to use corrosive or harsh cleaning methods and chemicals that can otherwise damage the finish.

Suitable for matte or gloss surfaces on wheels, brake calipers, exhaust tips, engine bay area.

With a super repellent capability enhanced using CNT, the coating can repel dirt, water and substances effectively. This keeps the treated surface cleaner for a longer period, reducing the frequency of cleaning or washing. With less contaminants having a chance to etch into the surface, this helps to reduce chances of water-spots and stains.

Chemical Resistance: pH2 - pH13

PRODUCT FINISHING

- Reflective shine
- Slick & smooth
- Enhances matte shine
- Darkens matte surfaces

- 2 years maximum durability
- Hydrophobic
- Corrosion resistant
- Slower UV Degradation (Hydrophobic Property)
- Chemical resistant
- Anti-fouling
- Etching reduction
- Easy cleaning
- Spreads easy
- Rapid water dispersion
- Dirt/dust repelling
- Anti static properties
- Low surface friction
- Excellent self-cleaning
- Stays cleaner longer

Available sizes: 30ml, 100ml, 500ml, 1L
